
Recent Publications on the History of Mining

Compiled by Lysa Wegman-French

The following bibliography contains books, dissertations and theses, articles and chapters, and other media, organized within those four categories, that relate to the history of all types of mining in North America (that is, Canada, the United States, and Central America). It does not include book review articles.

Many older books are now being reissued as e-books, and older films are being distributed as DVDs. We did not include them in this compilation since the content is not new. However, if you are interested in an older work, check to see if it is now available as an e-book or DVD. In addition, some works, especially government documents, films, and theses and dissertations, are available for viewing on the internet. We haven't included URLs for these, but again, check the internet for their availability.

We thank all the members who have sent in contributions, and welcome suggestions for our next compilation.
